

SERBIZ Website Proposal

Pitch and pricing for presenting the website to SERBIZ Resources Income Workers Cooperative. Internal reference for the client meeting. Prices are suggestions; final figures are set at the meeting. Prepared 13 September 2026.

The pitch

Open with their problem, not the website. SERBIZ sells trust and compliance to sole proprietors, one person corporations and SMEs. Today its only online presence is a Facebook page and printed flyers. A prospect who searches for the cooperative finds nothing they can verify, and a referral has nowhere to send a link.

What the site does for them, in four points:

- **Credibility.** A professional domain, the CDA registration, the office address and the mission and vision on one page a prospect can check before calling.
- **Enquiries around the clock.** Every layout has a contact form and a quick-message option that works from a phone, so a lead lands even outside office hours.
- **Found on Google.** Structured data, a sitemap and per-page metadata are already in place. A Facebook page alone is not indexed the same way.
- **One place to update.** Services, news and contact details live in one content layer. A new service or number changes once and appears everywhere.

Demo flow for the meeting

1. Walk the three preview links in the order v3, v1, v2, and ask them to pick one. That choice unblocks everything else.
2. Walk the pages of the chosen layout on a phone, since that is how their clients will see it.
3. Open the sign-off checklist and ask them to confirm the unverified facts, especially the office address and the registration number.

What they are buying

Present the scope as one package so the price reads as a whole, not a parts list.

- Custom-designed five-page site: home, about, services, news, contact. Three design directions were produced and one is selected.
- Mobile-first, accessible, fast. Built on a current framework with automated tests, so changes do not silently break pages.
- Search engine setup: metadata, sitemap, robots and organisation structured data.

- Contact form and quick-message dialog. The current form opens the visitor's mail app; reliable server-side delivery is a queued item and is included in the build price, not sold separately.
- Visitor analytics, already wired in.
- Deployment, domain setup and handover.

Pricing

Three-part structure. The one-time fee covers the build, the retainer keeps it alive, and third-party costs are passed through so the retainer stays honest.

Item	Suggested price	Notes
One-time build fee	PHP 65,000 to 85,000	Three design directions, custom build, tests, SEO, contact form delivery, launch. Mid-market for a custom site of this quality. Below 50k undersells three full layouts.
Payment terms	50% on signing, 50% at launch	Signing also means they have picked a layout and signed off the facts.
Care plan, monthly	PHP 2,500 to 3,500	Hosting management, security and dependency updates, uptime monitoring, up to two hours of content changes a month. Quote it annually with one month free.
Domain	PHP 1,000 to 1,500 / year	Pass through at cost. Recommend serbiz.ph or serbiz.com.ph, registered in their name, not ours.
Hosting	USD 0 to 20 / month	Vercel's free tier is not licensed for commercial sites. Budget the Pro plan or absorb it inside the care plan.
Additional pages or sections	PHP 5,000 to 8,000 each	Priced per request after launch. A pricing or packages section for their own customers falls here.

If they push back on the build fee, discount the second half rather than the deposit, and only in exchange for a twelve-month care plan commitment.

Decisions to get from them in the meeting

1. Which layout.
2. Sign-off on every fact marked unverified in the site configuration and the checklist.
3. Domain name, and who owns the registrar account.
4. One email address where contact form enquiries should go.
5. Care plan yes or no, because that changes the hosting arrangement.

Assumptions

Priced as an individual or small studio, not an agency, for a small cooperative rather than a corporate buyer. If either differs, the build fee moves up, not the structure.
